ZIKFLIX

Consumer Usage & Preference Analysis

A Descriptive Analytics Insights Report

Prepared by: Isaac Okolie | Data Analyst

Platform: ZikFlix, Inc. | Pan-African Streaming

Analysis Period: 2021 – 2025

Methodology: FIRE Framework

6,352 Hrs	88.9 Mins	17.28%	50,000
Total Watch Hours	Avg Watch Time	Completion Rate	Total Events

1. Introduction

ZikFlix is a pan-African streaming platform focused on Nollywood and regional storytelling. This report presents a descriptive analytics engagement using five years of event-level data covering users, content metadata, and viewing events. The analysis surfaces viewer preferences, regional patterns, device behavior, and monetization signals to support data-driven decision-making across content, product, and growth functions.

All findings are delivered through the FIRE framework — Facts, Insights, Recommendations, and Executive Summary — to transform complex streaming data into clear, actionable intelligence for executives.

---

2. Dataset Overview

Property	Detail
Dataset	ZikFlix Viewing Events (Cleaned)
Total Records	50,000 Viewing Events
Total Columns	19
Analysis Period	2021 – 2025
Visualization Tool	Power BI / Tableau

Key Fields:

Event_ID, Event_Timestamp, User_Id, Content_ID, Device_Type, Country, City, Watch_Duration_Minutes, Watch_Hours, Language_Used, Weekday, Year_Month, Age, Age_Group, Gender, Subscription_Tier, Primary_Genre, Content_Dur_Minutes, Is_Completed

---

3. Project Objectives

- Measure Total Watch Hours to assess the overall level of user engagement on the platform.
- Determine Average Watch Time per User to understand how deeply users interact with content.
- Calculate the Completion Rate to evaluate content retention and identify drop-off points.
- Identify Top Genres by Watch Hours to guide content investment and programming strategy.
- Examine regional usage patterns to determine countries with the highest platform engagement.
- Analyze content consumption by Age Group to define key audience segments.
- Evaluate device usage by Age Range to understand how different groups access the platform.
- Assess Gender Distribution to gain insights into audience diversity.
- Analyze Subscription Tier Distribution to evaluate monetization and conversion opportunities.

4. Key Performance Indicators

6,352 Hrs	88.9 Mins	17.28%	50,000
Total Watch Hours	Avg Watch Time	Completion Rate	Total Events

5. Analysis Tasks & Findings

TASK 1 — **Measure Total Watch Hours**

ZikFlix recorded a total of **6,352 watch hours**, demonstrating strong overall platform engagement. This confirms that users are not only accessing the platform but spending meaningful time consuming content.

Insight: The volume of watch hours confirms the platform has successfully captured user attention and is a viable digital entertainment platform within its target market.

TASK 2 — **Determine Average Watch Time per User**

The average watch time per user is approximately **88.9 minutes** — indicating that users typically spend over an hour per session on the platform.

Insight: Once users begin watching content, they tend to remain engaged for a significant duration. However, this should be evaluated alongside completion rate to fully understand retention quality.

TASK 3 — **Calculate Completion Rate**

The platform's completion rate stands at **17.28%**, indicating that a relatively small proportion of viewing sessions result in full content consumption.

Insight: While users engage with content, many do not complete what they start — pointing to potential issues such as content length, relevance, pacing, or recommendation effectiveness.

TASK 4 — **Identify Top Genres by Watch Hours**

Genre	Watch Hours	Rank
Drama	1.25K	#1 — Top Genre
Comedy	0.94K	#2
Romance	0.77K	#3

Genre	Watch Hours	Rank
Action	0.69K	#4
Fantasy	0.49K	#5
Thriller	0.47K	#6
Documentary	0.42K	#7
Family	0.41K	#8

Insight: Drama, Comedy, and Romance dominate — reflecting a strong user preference for emotionally engaging, story-driven content that aligns with Nollywood and African storytelling traditions.

TASK 5 **Examine Regional Usage Patterns**

Country	Total Events	Market Share
Nigeria	31,188	62.4% — Primary Market
Ghana	3,690	7.4%
Kenya	2,924	5.8%
South Africa	2,539	5.1%
Cameroon	2,043	4.1%

Insight: Nigeria is the dominant market — likely due to cultural alignment with Nollywood content and higher platform awareness. Ghana, Kenya, and South Africa represent high-potential emerging markets.

TASK 6 **Analyze Content Consumption by Age Group**

Age Group	Total Events	% of Total
Adult	23,691	47.4%
Mid-Age	11,533	23.1%
Young Adult	10,357	20.7%
Teen	2,966	5.9%

Age Group	Total Events	% of Total
Older	1,453	2.9%

Insight: Adults are the dominant audience — representing the platform's core user base. Young Adults and Mid-Age users follow closely, confirming the platform appeals to mature, digitally active individuals.

TASK 7 — Evaluate Device Usage by Age Range

Device	Total Events	% of Total
Mobile Phone	26,972	54.0% — #1 Device
Web	10,898	21.8%
Smart TV	8,290	16.6%
Tablet	3,840	7.7%

Insight: Mobile phones dominate across all age groups — reflecting broader digital consumption trends across Africa where mobile accessibility is the primary mode of internet access.

TASK 8 — Assess Gender Distribution

Gender	Total Events	Percentage
Female	23,677	49.05%
Male	24,353	47.16%
Non-binary	991	1.94%
Prefer Not Say	979	1.85%

Insight: Gender distribution is near-balanced — Female slightly edges Male. The platform appeals broadly across genders, making it well-positioned for inclusive content and marketing strategies.

TASK 9 — Analyze Subscription Tier Distribution

Tier	Users	Percentage
Free (Ad-Supported)	28,084	52.75% — Majority
Basic	12,191	25.57%

Tier	Users	Percentage
Premium	9,725	21.68%

Insight: Over half of users are on the free tier — highlighting that platform growth is largely accessibility-driven. This represents a significant opportunity to improve monetization through paid conversion strategies.

---

6. Strategic Recommendations

1. Optimize for Mobile-First Experience

Improve streaming quality on low bandwidth, enhance UI design, and introduce offline download features. Mobile is the primary access point across all age groups.

2. Invest in High-Performing Content Genres

Allocate more resources toward Drama, Comedy, and Romance — the top 3 genres by watch hours. This will align with user preferences and strengthen audience retention.

3. Improve Content Completion Rate

The 17.28% completion rate signals content retention issues. Consider shorter, more engaging formats, improved recommendation algorithms, and a stronger Continue Watching feature.

4. Target Core Audience Segments

Adults and Young Adults drive the majority of watch time. Tailor content and marketing toward these segments with personalized recommendations and targeted campaigns.

5. Enhance Monetization Strategy

With 52.75% of users on the free tier, there is a major opportunity to convert to paid plans through premium-exclusive content, limited-time discounts, and managed ad frequency.

6. Expand into High-Potential Regions

While Nigeria dominates at 62%, Ghana, Kenya, and South Africa show strong engagement. Expand through localized content, regional partnerships, and targeted marketing.

7. Leverage Data for Continuous Improvement

Adopt a data-driven culture — continuously monitor KPIs such as MAU, Watch Hours, and Completion Rate to guide decisions and respond quickly to behavior changes.

---

7. Expected Outcomes

If the strategic recommendations are implemented, the following outcomes are expected:

Recommendation	Expected Outcome
Mobile optimization	Higher satisfaction and engagement across the largest user segment — reducing drop-off caused by poor mobile experience.
Genre investment (Drama, Comedy, Romance)	Increased watch hours and stronger audience retention as content aligns with proven user preferences.
Completion rate improvements	More users finishing content — boosting engagement quality and platform credibility with advertisers.
Core audience targeting (Adults, Young Adults)	Deeper engagement and higher content satisfaction within the segments that drive the most watch time.
Paid conversion strategy	Revenue growth from the 52.75% free-tier user base — converting even 10% would significantly boost platform income.
Regional expansion (Ghana, Kenya, South Africa)	Platform growth beyond Nigeria into high-potential markets with existing user bases.
Continuous KPI monitoring	Faster detection of engagement shifts, enabling the platform to adapt content and product strategy in near-real time.

8. Executive Summary & Conclusion

ZikFlix has leveraged comprehensive descriptive analytics to gain actionable insights into user behavior, content performance, and regional engagement across its pan-African platform.

Key Findings:

- Total Watch Hours of 6,352 confirms a strong and active user base.
- Average Watch Time of 88.9 minutes demonstrates deep per-session engagement.
- Completion Rate of 17.28% highlights a critical content retention challenge.
- Drama, Comedy, and Romance are the top genres — emotionally driven content wins.
- Nigeria dominates at 62% of all events — Nollywood alignment is a core strength.
- Mobile Phone accounts for 54% of all viewing events — mobile-first is non-negotiable.
- Gender distribution is near-balanced — inclusive content strategy is well-supported.
- 52.75% of users are on the free tier — monetization conversion is the biggest revenue opportunity.

The findings from this analysis provide ZikFlix with a clear strategic roadmap. The most immediate opportunities are: improving content completion rates through better recommendations and content formats, and converting free-tier users into paying subscribers. Together, these two priorities can significantly improve both engagement quality and platform revenue — without requiring additional user acquisition spend.
